SAFETY DATA SHEET

r				ECO #: 100	1735
Other:					l
	Silicon Dioxide (Gel batteries only)	7631-86-9	1-5		
	Sheet Molding Compound				
	(Glass reinforced polyester)				
	Inorganic lead and electrolyte (sulfuric acid) are the pr	rimary components of ev	very battery manufactur	red by Hawker.	
	Other ingredients may be present dependent upon batt	ery type. Contact your	Hawker representative	for additional information.	
IV. FIRST	TAID MEASURES				
Inhalation:					
1	Sulfuric Acid: Remove to fresh air immediately. If br		e oxygen. Consult a phy	vsician	
	Lead: Remove from exposure, gargle, wash nose and	lips; consult physician.			
Ingestion:					
	Sulfuric Acid: Give large quantities of water; do not in	nduce vomiting or aspir	ation into the lungs ma	y occur and can cause permanent injury or death;	
	consult a physician				
	Lead: Consult physician immediately.				
<u>Skin:</u>					
	Sulfuric Acid: Flush with large amounts of water for a				
	If symptoms persist, seek medical attention. Wash con	taminated clothing befo	ore reuse. Discard conta	iminated shoes	
-	Lead: Wash immediately with soap and water.				
Eyes:	Sulfunia Aaid and Load, Elush immediately with how	amounto of f	loost 15 minutes	lifting lide	
	Sulfuric Acid and Lead: Flush immediately with large		least 15 minutes while	lifting lids	
	Seek immediate medical attention if eyes have been ex	sposed directly to acid.			
V. FIRE F	TIGHTING MEASURES	Flammable Limits:	EI = 4.1% (Hydrogen	(Gas) UEL = 74.2%	
	ing Media: CO2; foam; dry chemical. Do not use carbo			,	
		on dioxide directly on ce	ans. Avoid breatning va	pors. Use appropriate media for surrounding fire.	
Special Fire	re Fighting Procedures:	a pressure salf contain	ad broothing apparatus	Water emplied to electrolyte generates

X. STABILITY AND REACTIVITY	ECO #:	1001733
Stability: Stable X Unstable		
This product is stable under normal conditions at ambient temperature		
Conditions To Avoid: Prolonged overcharge; sources of ignition		
Incompatibility: (Materials to avoid)		
Sulfuric Acid: Contact with combustibles and organic materials may cause fire and explosion. Also reacts violently with strong reducing agent	s,	
metals, sulfur trioxide gas, strong oxidizers and water. Contact with metals may produce toxic sulfur dioxide fumes and may release flammable		
hydrogen gas.		
Lead Compounds: Avoid contact with strong acids, bases, halides, halogenates, potassium nitrate, permanganate, peroxides, nascent hydrogen		
and reducing agents.		
Arsenic compounds: strong oxidizers; bromine azide. NOTE: hydrogen gas can react with inorganic arsenic to form the highly toxic gas-arsine.		
Hazardous Decomposition Products:		
Sulfuric Acid: Sulfur trioxide, carbon monoxide, sulfuric acid mist, sulfur dioxide, and hydrogen sulfide.		
Lead Compounds: High temperatures likely to produce toxic metal fume, vapor, or dust; contact with strong acid or base or presence of nascent		
hydrogen may generate highly toxic arsine gas.		
Hazardous Polymerization:		
Will not occur		
XI. TOXICOLOGICAL INFORMATION		
Routes of Entry:		
Sulfuric Acid: Harmful by all routes of entry.		
Lead Compounds: Hazardous exposure can occur only when product is heated, oxidized or otherwise processed or damaged to create dust, vap	or	
or fume. The presence of nascent hydrogen may generate highly toxic arsine gas.		
Inhalation:		
Sulfuric Acid: Breathing of sulfuric acid vapors or mists may cause severe respiratory irritation.		
Lead Compounds: Inhalation of lead dust or fumes may cause irritation of upper respiratory tract and lungs.		
Ingestion:		
<u>Sulfuric Acid</u> : May cause severe irritation of mouth, throat, esophagus and stomach.		
Lead Compounds: Acute ingestion may cause abdominal pain, nausea, vomiting, diarrhea and severe cramping. This may lead rapidly to system	mic	
toxicity and must be treated by a physician.		
Skin Contact:		
Sulfuric Acid: Severe irritation, burns and ulceration.		
Lead Compounds: Not absorbed through the skin.		
Arsenic Compounds: Contact may cause dermatitis and skin hyper pigmentation.		
Eye Contact:		
Sulfuric Acid: Severe irritation, burns, cornea damage, and blindness.		
Lead Components: May cause eye irritation.		
Effects of Overexposure - Acute:		
<u>Sulfuric Acid</u> : Severe skin irritation, damage to cornea, upper respiratory irritation.		
Lead Compounds: Symptoms of toxicity include headache, fatigue, abdominal pain, loss of appetite, muscular aches and weakness, sleep		
disturbances and irritability.		
Effects of Overexposure - Chronic: Sulfuric Acid: Possible erosion of tooth enamel, inflammation of nose, throat and bronchial tubes.		
Lead Compounds: Anemia; neuropathy, particularly of the motor nerves, with wrist drop; kidney damage; reproductive changes in males and		
females. Repeated exposure to lead and lead compounds in the workplace may result in nervous system toxicity. Some toxicologists report abno	rmal	
conduction velocities in persons with blood lead levels of 50mcg/100 ml or higher. Heavy lead exposure may result in central nervous system d		
encephalopathy and damage to the blood-forming (hematopoietic) tissues.	amage,	
Carcinogenicity:		
Sulfuric Acid: The International Agency for Research on Cancer (IARC) has classified "strong inorganic acid mist containing sulfuric acid" as a	ı	
Group 1 carcinogen, a substance that is carcinogenic to humans. This classification does not apply to liquid forms of sulfuric acid or sulfuric		
acid solutions contained within a battery. Inorganic acid mist (sulfuric acid mist) is not generated under normal use of this product. Misuse of	the	
product, such as overcharging, may result in the generation of sulfuric acid mist.	-	
Lead Compounds: Lead is listed as a Group 2A carcinogen, likely in animals at extreme doses. Per the guidance found in OSHA 29 CFR 1910	.1200	
Appendix F, this is approximately equivalent to GHS Category 1B. Proof of carcinogenicity in humans is lacking at present.		
Arsenic: Arsenic is listed by IARC as a Group 1 - carcinogenic to humans. Per the guidance found in OSHA 29 CFR 1910.1200 Appendix F, the	nis is	
approximately equivalent to GHS Category 1A.		
Medical Conditions Generally Aggravated by Exposure:		
Overexposure to sulfuric acid mist may cause lung damage and aggravate pulmonary conditions. Contact of sulfuric acid with skin may aggravate	ate	
diseases such as eczema and contact dermatitis. Lead and its compounds can aggravate some forms of kidney, liver and neurologic diseases.		
as estentia and contact administration 2000 and its compounds can aggiurate some torms of induces, inter and neurologic diseases.		

Acute Toxicity: Inhalation LD50:

<u>Electrolyte:</u> LC50 rat: 375 mg/m3; LC50: guinea pig: 510 mg/m3 <u>Elemental Lead:</u> Acute Toxicity Point Estimate = 4500 ppmV (based on lead bullion) <u>Elemental Arsenic:</u> No data

Oral LD50:

Electrolyte: rat: 2140 mg/kg

Elemental Lead: Acute Toxicity Estimate (ATE) = 500 mg/kg body weight (based on lead bullion) Elemental Arsenic: LD50 mouse: 145 mg/kg Elemental Antimony: LD50 rat: 100 mg/kg

Additional Health Data:

All heavy metals, including the hazardous ingredients in this product, are taken into the body primarily by inhalation and ingestion. Most inhalation problems can be avoided by adequate precautions such as ventilation and respiratory protection covered in Section 8. Follow good personal hygiene to avoid inhalation and ingestion: wash hands, face, neck and arms thoroughly before eating, smoking or leaving the worksite. Keep contaminated clothing out of non-contaminated areas, or wear cover clothing when in such areas. Restrict the use and presence of food, tobacco and cosmetics to non-contaminated areas. Work clothes and work equipment used in contaminated areas must remain in designated areas and never taken home or laundered with personal non-contaminated clothing. This product is intended for industrial use only and should be isolated from children and their environment.

The 19th Amendment to EC Directive 67/548/EEC classified lead compounds, but not lead in metal form, as possibly toxic to reproduction. Risk phrase 61: May cause harm to the unborn child, applies to lead compounds, especially soluble forms.

ead compounds, especially soluble forms.
mental degradation. Mobility of metallic lead between ecological compartments is slow.
and plants but little bioaccumulation occurs through the food chain.
