

New Product Release

Crank Master High Performance – Silver Calcium Technology

DIN165SC

The newest edition to the Hella Endurant Crank Master Silver Calcium range is the DIN165SC. This will be replacing the Lead Antimonial DIN165.

The DIN165SC is the perfect battery for some European heavy commercial vehicles and tractors. The DIN165SC can be used in a few Iveco, Renault and Fiat trucks, as well as Deutz tractors.

The Silver Calcium technology with tin content in the plate construction gives the DIN165SC premium heat and corrosion protection, and maximum cranking ability compared to a standard calcium battery. The DIN165SC is made with top quality to withstand harsh vibration with heavy commercial applications. Each DIN165SC is fully sealed and maintenance free, with a complex lid to recombine gasses harmlessly into water for your safety and convenience.

The Hella Endurant DIN165SC carries a nationwide 24 month warranty.
